Turn a Beautiful Corner with TruWood® Designer Trim in Beveled and Channeled Styles

PORTLAND, Ore. June 5, 2008—Collins Products now offers architects and builders new Designer Trim options to complement its TruWood® Siding and Trim lines. The new beveled and channeled engineered wood trim lines create a durable and stylish first impression with elegant relief patterns particularly desirable for door and window trim applications.

TruWood® Designer Beveled Trim utilizes a traditional Roman Ogee bevel cut while the channeled style features two fine, 1/16" channels at both edges of the trim board. Both styles offer added trim detail for increased curb appeal and are available with either TruWood's distinctive Old Mill cedar wood grain texture or a smooth surface for application flexibility. TruWood® Designer Trim is available in 4" and 6" widths and thicknesses of 4/4" and 5/4" to coordinate with both 7/16" and 1/2" siding.

Produced from residual wood fibers, TruWood® Designer Beveled Trim is free of finger joints, knots and other natural flaws, reducing waste and preventing the occurrence of splitting, warping and checking. TruWood® Trim is made using a high percentage of recycled wood fibers and is certified by Scientific Certification Systems, making it an environmentally conscious product perfect for buildings using the LEED (Leadership in Energy and Environmental Design) Green Building Rating System.

TruWood® Siding and TruWood® Trim are manufactured by Collins Products, a division of The Collins Companies. Based in Portland, Oregon and family-owned since 1855, Collins produces high quality wood products including engineered wood siding and trim, softwoods, hardwoods, millwork, veneers and particleboard. Collins also features a full line of FSC-certified wood products. For more information, call 800-417-3674 or visit www.CollinsWood.com.
